Customer JSON File Data Description

Field	Description	Path	C# Data Type
Customer	An array of all the customers.	Customer	List <customer></customer>
LastName	Contains the last name of the customer, used as one of the primary identifiers.	Customer.[key].LastName	String
FirstName	Contains the first name of the customer, used for identification.	Customer.[key].FirstName	String
PhoneNumber	Contains a unique phone number that is used as a primary identifier for each customer.	Customer.[key].Phone	String
Order History	An array that keeps track of a customer's order.	Customer.[key].OrderHistory[]	List <order></order>
CustomerID	Keep track of which customer placed the order.	Customer.[key].OrderHistory[index].CustomerID	String
Date	Tracks when an order was placed.	Customer.[key].OrderHistory[index].Date	C# DateTime
Tax	Calculates the tax to be placed on each product.	Customer.[key].OrderHistory[index].Tax	Decimal
Subtotal	Calculates the total of all the drinks in an order before tax is added.	Customer.[key].OrderHistory[index].Subtotal	Decimal
Total	Calculates to total after tax and subtotal are added together.	Customer.[key].OrderHistory[index].Total	Decimal
PaymentMethoc	Contains the payment method that was used in the purchase of the order. Can be "Credit Card" or "Reward Points."	Customer.[key].OrderHistory[index].PaymentMethod	String
Drinks	Drinks which the customers ordered.	Customer.[key].OrderHistory[index].Drink[index2]	List <drink></drink>
Name	The name of the drink that was ordered.	Customer.[key].OrderHistory[index].Drinks[index2.Name]	String
Customizations	Any additional customizations added to the drink	Customer.[key].OrderHistory[index].Drink[index2].Customizations	String
Total	The total of everything that was in the order, from drinks to each customization	Customer.[key].OrderHistory[index].Drink[index2].Total	Decimal

^{*} The [key] used in this diagram would be the customer's phone number
